

Friends of Farmers

Six students from grades 9, 10, and 11 participated in the "Made in 3D Seed: The Future Entrepreneurs Programme" under the Students Entrepreneurs Programme Season 2023-2024, organised by La Fondation Dassault Systèmes. Their product, Silo Precision X, is an automatic silage-making machine that uses solar power to chop, mix, and arrange silage in biodegradable bags, making it easy for farmers to use. The students aimed to solve the problem of wasted green fodder by turning it into valuable silage. Bhuvan PM from Class 11, Aryan Kini from Class 10, Nandan Hegde from Class 10, Ishaan Rajesh from Class 10, Prathuysh M from Class 9, and Partha M Raj from Class 9 developed this contemporary product designed to benefit agriculturists and secured a place among the top 36 semi-finalist teams.
